

Singapore International Water Week 2018

9 to 11 July 2018 marked Shimizu's second participation in the Singapore International Water Week (SIWW), a global platform for us to share and co-create innovative water solutions.

Green Float, a mega floating city, allows for land creation that is more environmentally friendly as compared to reclamation. Not only does it create possibility for city locations to be on the ocean surface, it is also immune from the impact of earthquakes and rising sea levels.

Aero Squeezer provides solutions to areas which have difficulties finding clean water as it makes use of special technology to produce purified drinking water.
