

Mangrove Planting

To understand that mangroves contribute to prevention of global warming by absorbing CO2.

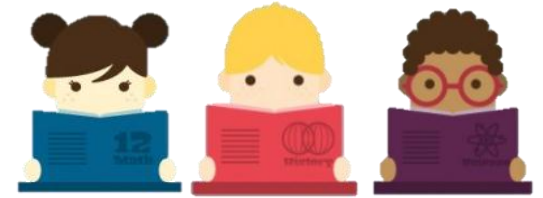

Thai Shimizu participated Mangrove planting project which is set up by The Ministry of Natural Resources and Environment with NGO in Thailand.

Mangroves that keeps coastal zones healthy. Mangroves provide essential habitat for thousands of species. They also stabilize shorelines, preventing erosion and protecting the land and the people who live there from waves and storms.

In 2016, On 14th May and 27th August We Mangrove planting with about **5,000 tree** at Bang Laem Education Center Petchaburi . Participate in this mangrove planting activity. To contribute to the preservation of a mangrove forest invaluable to the earth, we will continue to participate in the activity again next year and beyond.

Student The ECO 4R's

Reduce, Reuse , Recycle and Reject for environment

Education is the beginning of learning and implementation. At Thai Shimizu, we arrange environmental activities every year teaching the 4R's : Reduce, Reuse, Recycle and Reject in order to encourage environment preservation awareness. On 22 June 2016, we taught students eco awareness at Baan Phusai School, Khaomaikaew Tambon Banglamung Amphur Chonburi Province near Site TRT & Idemitsu. We focused on grade's 4-5-6 involving 80 student to learn and utilize environmental 4R's in their daily life. TSMZ Eco committee arranged with the project teams and invited the customers to join the eco campaigns, donate gifts, and educational equipment to the school, and also awarded environmental drawing, and tree planting.
